About PCORI

About Us

- An independent research institute authorized by Congress in 2010 and governed by a 21-member Board of Governors representing the entire healthcare community
- Funds comparative clinical effectiveness research (CER) that engages patients and other stakeholders throughout the research process
- Seeks answers to real-world questions about what works best for patients based on their circumstances and concerns; reauthorized in 2019 for 10 years

We Fund Comparative Clinical Effectiveness Research (CER)

- Generates and synthesizes evidence comparing benefits and harms of at least two different methods to prevent, diagnose, treat, and monitor a clinical condition or improve care delivery
- Measures benefits in real-world populations
- Describes results in subgroups of people
- Helps consumers, clinicians, purchasers, and policy makers make informed decisions that will improve care for individuals and populations
- Informs a specific clinical or policy decision

Note: We do not fund cost-effectiveness research

Adapted from *Initial National Priorities for Comparative Effectiveness Research*, Institute of Medicine of the National Academies

Patient-Centered Outcomes Research

PCOR is a relatively new form of CER that....

- Considers patients' needs and preferences, and the outcomes most important to them
- Investigates what works, for whom, under what circumstances
- Helps patients and other healthcare stakeholders make better-informed decisions about health and healthcare options

What We Mean By...

“Patient-centeredness”

- The project aims to answer questions or examine outcomes that matter to patients within the context of patient preferences
- Research questions and outcomes should reflect what is important to patients and caregivers

“Patient and stakeholder engagement”

- Patients are partners in research, not just “subjects”
- Active and meaningful engagement between scientists, patients, and other stakeholders
- Community, patient, and caregiver involvement already in existence or a well-thought-out plan

2.

PCORI Rare Disease Research: Past and Present

PCORI Advisory Panels

- PCORI maintains advisory panels that include representation of clinicians, patients, scientific and health services research, and industry
- PCORI Advisory panels
 - Clinical Effectiveness and Decision Science
 - Healthcare Delivery and Disparities Research
 - Patient Engagement
 - Clinical Trials*
 - *Rare Disease**
- [Applications](#) for the 2021 cycle for all advisory panels are currently open

-
- A map of the United States where states are colored either blue or gray. Blue states include Washington, Oregon, California, Nevada, Arizona, New Mexico, Texas, Oklahoma, Kansas, Nebraska, South Dakota, North Dakota, Minnesota, Iowa, Missouri, Arkansas, Louisiana, Mississippi, Alabama, Georgia, Florida, South Carolina, North Carolina, Virginia, West Virginia, Maryland, Delaware, Pennsylvania, New Jersey, Connecticut, Rhode Island, Massachusetts, Vermont, New Hampshire, Maine, New York, and Hawaii. Gray states include Montana, Wyoming, Idaho, Utah, Colorado, New Mexico, Arizona, California, Nevada, Oregon, Washington, Alaska, and Puerto Rico. The District of Columbia is also listed as included.
- Plus:
District of Columbia
Puerto Rico
- As of August 2018

As of August 2018

Rare Disease Portfolio: Specific Conditions

- Acute myeloid leukemia
- Cerebral palsy
- Chiari type I malformation (CM) & syringomyelia (SM)
- Disorders of sex development
- Duarte galactosemia
- Eosinophilic esophagitis
- Hydrocephalus
- Idiopathic subglottic stenosis
- Lupus nephritis
- Kawasaki disease
- Non-CF bronchiectasis
- Pediatric Crohn's disease
- Pediatric transverse myelitis
- Polyarticular Juvenile Idiopathic Arthritis
- Sickle cell disease
- Spinal cord injury and spina bifida
- Systemic scleroderma
- Urea cycle disorders
- Myasthenia gravis

Research Opportunities

Eugene Washington PCORI Engagement Award Program

- Support projects to build a community of patients and other stakeholders equipped to participate as partners in PCOR/CER, as well as serve as channels to disseminate PCORI-funded study results
- Funding to support engagement in, and with, research, not to conduct research

Engagement Award Funding Opportunities

\$250,000
Up to 2 years

Engagement Award: Capacity Building

Objective: Prepare patients and stakeholders to participate as partners in PCOR/CER and/or develop partnerships and infrastructure to disseminate and implement PCORI-funded research findings

Most Recent Letter of Intent due date: October 1, 2020

\$250,000
Up to 2 years

Engagement Award: Dissemination Initiative

Objective: Support communities and organizations to actively disseminate PCORI-funded research findings

Most Recent Letter of Intent due date: October 1, 2020

\$100,000
Up to 1 year

Engagement Award: Stakeholder Convening Support

Objective: Convene stakeholders to explore critical issues related to PCOR/CER and/or communicate PCORI-funded research findings to targeted end-users

Most Recent Application due date: October 1, 2020

4.

Funding Example: Conference Award

Example: Conference Award

Wilms Tumor in WAGR Syndrome

- The International WAGR Syndrome Association (IWSA) received a conference support award to:
 - Engage parents and researchers in planning clinical studies
 - Develop a patient-centered model for this research
 - Develop consensus on research questions
 - Create educational awareness materials for use by all stakeholders

Resources

PCORI Funding Opportunities

- Our research funding is awarded through PCORI Funding Announcements.
- Open opportunities are posted at pcori.org/apply.

A screenshot of the PCORI website's "Funding Opportunities" page. The page has a green header with a link to "PCORI's Response to COVID-19" and a "Read" button. Below the header is a navigation bar with links for "BLOG", "NEWSROOM", "HELP CENTER", "SUBSCRIBE", "CAREERS", "FIND IT FAST", and "CONTACT US". The main navigation bar is blue and includes "ABOUT US", "RESEARCH & RESULTS", "TOPICS", "ENGAGEMENT", "FUNDING OPPORTUNITIES" (which is highlighted), and "MEETINGS & EVENTS". The page content is divided into two columns. The left column lists links: "Funding Opportunities", "What & Who We Fund", "What You Need To Know To Apply", "Applicant Training", "Merit Review", "Awardee Resources", and "Help Center". The right column has a heading "Funding Opportunities" and three filter buttons: "Open", "Upcoming" (which is selected), and "Closed". Below the filters, there is a section titled "Open Opportunities" with a paragraph about COVID-19 related FAQs and a link to "View the FAQs". At the bottom, a paragraph states that all open funding opportunities can be found below and advises first-time applicants to use the full funding announcement PDF and specific application guidelines.

NORD®
National Organization
for Rare Disorders

NORD Research Webinar Series: Insights & Advice

Patricia Seymour, CCRC, MA, CIP, IRB Administrator
and Human Subject Protection Director

AGENDA

- What is an IRB? Why do we need it?
- When do you need to obtain approval for your research?
- What will you need to submit to the IRB?
- Who should be involved in designing and carrying out research?
- What about external research requests?
- Day to day questions and resources
- Some self-promotion and good news

When Do I Need IRB Review of My Study?

- When there is interaction with participants
- When you are collecting data (or specimens) from/about participants

What is an IRB and Why Do We Need It?

- Independent or Institutional Review Boards exist to apply US regulations and guidance to the conduct of all kinds of research.
- The IRB is composed of scientists, physicians and community or non-affiliated local people.
- Nearly 90% of the research conducted in the US requires IRB review.

What Do I Need to Submit to the IRB?

- Protocol
- Consent, assent, information sheet
- Recruitment materials
- Assessments or surveys
- CV/resume of the Principal Investigator
(Person responsible for the Research study)
- IRB's application for submission

WHO SHOULD BE INVOLVED IN DESIGNING AND CARRYING OUT RESEARCH?

- Research takes time, careful documentation and lots of reliable help!
- If there is no funding, committed volunteers may be able to assist in start-up and sustain the research and the organization.
- Training should be sought, online courses available for free, NORD staff members are knowledgeable and extremely helpful.
- Medical advisory boards can be useful in reviewing protocol design, assisting in deciding on whether sponsor studies are right for your organization and helping with interpreting data.
- Please have a back-up plan for when a key member of your team has an emergency or has to step away from the research. Redundancy in research is important to advance the progress of research.

CONSENT

- Consent in a research environment is different than the medical field.
- Voluntariness, which of course extends to medical procedures, is interpreted a little differently in research.
- Research participants can take as much time as they wish, ask as many questions as they have and ask to speak to the Principal Investigator to answer questions as well.
- Research participants can withdraw their decision to consent at any time.
- Consent has to be obtained before any research activities take place.
- Consents must be saved in a secure location.
- Participants have a right to a copy.

Data Sharing

- The consent will detail the extent and circumstances of when data will be shared within your organization, with an organization such as NORD, and which organizations will have a right to see the data as a result of the research oversight.
- Data can only be shared according to the language of the consent.
- The Medical Advisory Board as referenced in external research considerations should have final say when data may be shared.

EXTERNAL REQUESTS TO USE DATA OR PARTICIPANT'S INFORMATION

- Our participants rely on their advocates and organizations to keep their data safe and confidential.
- External investigators and companies may present themselves as wanting to contribute to research on the condition, but we have a responsibility to become involved in only the most scientifically sound and well-designed research.
- This is why we have IRBs, organizations such as NORD and our Medical Advisory Boards. All work together to choose and support you and your constituents.
- Please use your Medical Advisory Boards to review requests from outside entities and then use the IRB to further protect the rights and welfare of participants.

New, Nonprofit IRB

- Some of you may remember Hummingbird IRB which prided itself on flexible pricing and helpful service.
- Hummingbird was purchased by a large, central IRB system and had to assume a new pricing structure.
- My commitment to students, nonprofit organizations and small businesses has brought me to starting a new IRB that will feature a sliding scale approach to pricing and a more traditional fee schedule for industry sponsored research.
- The good news? We will be ready in January to accept research!

North Star Review Services

- Dr. Stephen Rosenfeld and I are joining forces to bring you this new IRB.
- We will be joined by some of the people from Hummingbird IRB so you know that you will receive great reviews and service.
- Stephen Rosenfeld, MD, MBA is the immediate past Chairman of The Secretary's (Health and Human Services) Advisory Committee on Human Research Protections (SACHRP).
- Former Chairman of Quorum Review Board
- Former President and CEO Western Institutional Review Board

If you have additional questions
